PROJECTS

1.Face Recognition Attendance System —

Focus of this Project is to collect attendance of students

by face recognition and feed the data into a database. This project can also be used as a Student management system.This Project helps reduce paperwork and it also saves time.

2.Home Automation using Arduino-

Home automation” refers to the automatic and electronic control of household features, activity, and appliances.In this project, we designed a simple Arduino Bluetooth Control Home Automation using the HC-05 Bluetooth module, which is used to switch ON or OFF different electrical appliances remotely. Home Automation systems can make our life easy and secure. Project can control different home appliances using Smartphone App through Bluetooth communication.
